List of countries by GDP (nominal)

This is the current revision of this page, as edited by [YMVD \(talk | contribs\)](#) at 08:04, 25 July 2023 (→*Table: Corrected GDP data (Cuba)*). The present address (URL) is a [permanent link to this version](#).

Gross domestic product (GDP) is the market value of all final goods and services from a nation in a given year.^[2] Countries are sorted by nominal GDP estimates from financial and statistical institutions, which are calculated at market or government official exchange rates. Nominal GDP does not take into account differences in the cost of living in different countries, and the results can vary greatly from one year to another based on fluctuations in the exchange rates of the country's currency.^[3] Such fluctuations may change a country's ranking from one year to the next, even though they often make little or no difference in the standard of living of its population.^[4]

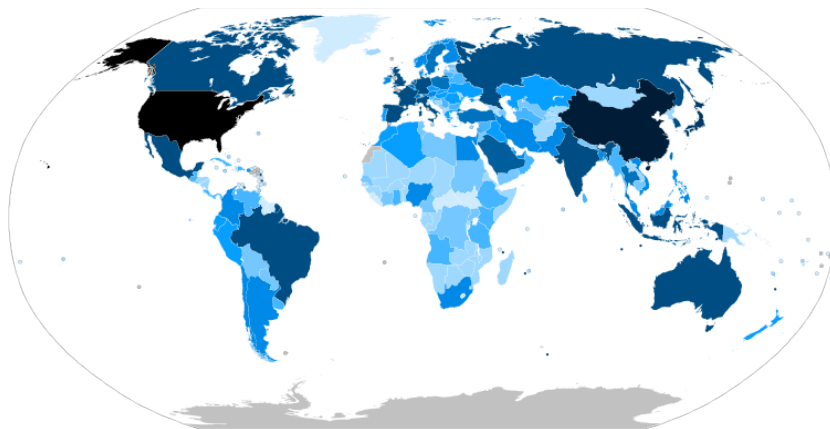

Comparisons of national wealth are also frequently made on the basis of [purchasing power parity](#) (PPP), to adjust for differences in the cost of living in different countries. Other metrics, [nominal GDP per capita](#) and a corresponding [GDP \(PPP\) per capita](#) are used for comparing national [standard of living](#). On the whole, PPP per capita figures are less spread than nominal GDP per capita figures.^[5]

The rankings of national economies over time have changed considerably; the United States surpassed the [British Empire's](#) output around 1916,^[6] which in turn had surpassed the [Qing dynasty](#) in aggregate output decades earlier.^{[7][8]} Since China's [transition to a socialist market economy](#) through controlled privatisation and deregulation,^{[9][10]} the country has seen its ranking increase from ninth in 1978, to second in 2010; China's economic growth accelerated during this period and its share of global nominal GDP surged from 2% in 1980 to 18% in 2021.^{[8][1][11]} Among others, India has also experienced an economic boom since the implementation of [economic liberalisation](#) in the early 1990s.^[12]

The first list includes estimates compiled by the [International Monetary Fund's](#) [World Economic Outlook](#), the second list shows the [World Bank's](#) data, and the third list includes data compiled by the [United Nations Statistics Division](#). The IMF definitive data for the past year and estimates for the current year are published twice a year in April and October. Non-sovereign entities (the world, continents, and some [dependent territories](#)) and states with limited international

Largest economies in the world by GDP (nominal) in 2023 according to [International Monetary Fund](#) estimates^{[n 1][1]}

Countries by nominal GDP in 2019^[n 2]

 > \$20 trillion	 \$750 billion – \$1 trillion	 \$50–100 billion
 \$10–20 trillion	 \$500–750 billion	 \$25–50 billion
 \$5–10 trillion	 \$250–500 billion	 \$5–25 billion
 \$1–5 trillion	 \$100–250 billion	 < \$5 billion

recognition (such as Kosovo and Taiwan) are included in the list where they appear in the sources.

Table

The table initially ranks each country or territory with their latest available estimates, and can be reranked by either of the sources

The links in the "Country/Territory" row of the following table link to the article on the GDP or the economy of the respective country or territory.

GDP (USD million) by country
